

iCE40-IO

ICE40-IO IS MODULE WITH VGA, PS/2 AND IRDA LINK

This is an extension module for iCE40HX1K-EVB. It is meant to make the input and output easier - the module provides video output connector VGA DE-15; keyboard connector PS2; infra red chip TFDU4100 for IrDA connectivity.

Typically, you would need only a single iCE40-IO module in your setup. Using an iCE40-IO would reduce the number of ADC and DAC expansion modules that you can use with a single iCE40HX1K-EVB board.
